## EVERY GENUINE COPY OF THIS BOOK HAS A HOLOGRAM

In our endeavour to protect you against counterfeit/fake books, we have pasted a copper hologram over the cover of this book. The hologram displays the full visual image, unique 3D multi-level, multi-colour effects of our logo from different angles when tilted or properly illuminated under a single light source, such as 3D depth effect, kinetic effect, pearl effect, gradient effect, trailing effect, emboss effect, glitter effect, randomly sparking tiny dots, micro text, laser numbering, etc.

*A fake hologram does not display all these effects.*

Always ask the bookseller to put his stamp on the first page of this book.

## PREFACE

---

Real analysis is currently being taught in all Indian universities as a part of the mathematics curricula for various under-graduate programs including B.Sc. (H), B.A. (Prog.), B.Sc (Prog.) etc. A sound knowledge of the limiting concepts, which is the core of real analysis, is a pre-requisite for further study of abstract mathematical ideas. With time, it has become more pertinent due to the applications of mathematical theories in several important upcoming fields including Computer Science, Bio-Sciences, Genetics, Financial Modelling etc. Our experience shows that students with clear understanding of the basic concepts of analysis find it easier to grasp the abstract ideas later in these fields.

A good student-friendly book is a basic requirement for developing interest amongst the students for such analytical concepts. Although there are many books written on the subject of real analysis, there are still very few student-friendly books available in the market which can cater to the present syllabus of the Indian universities.

With this background, the authors have come up with the idea of writing a book on real analysis, covering the topics which are presently being taught in the undergraduate level of the Indian universities. The book covers a wide range of topics including the real numbers, sequences, series, limit, continuity, differentiability, Riemann integrals, improper integrals, sequence and series of functions, power series etc. They are spread over eleven chapters in the book. Each chapter is further divided into sections, depending on the variations of the subject matter. Each concept introduced in the book is explained in detail in simple language so that students can grasp it without difficulty. Proofs of the results are provided in an easy, step-by-step manner. A good number of examples are provided so that definitions and results can be easily understood by the students. Our experience has shown that students usually find it easier to comprehend through graphs and diagrams. Hence graphs and diagrams are provided at many places in the book. Students will do well to memorize these graphs. In fact, we have provided appendices to provide the basic concepts of curve tracing in the book. Remarks are used throughout the book to point out and discuss the hidden aspects of the definitions and the theorems, if there is any. Exercises are provided at the end of each section so that students may have sufficient practice of problem solving. Hints and answers of these exercises are provided towards the end of the book.

Overall, the book is student-friendly, yet full of rigour. We hope that the students as well as the teachers will feel happy to carry this book into the classroom.

The authors take this opportunity to thank the people who helped them during the preparation of the book. We whole-heartedly thank Prof. C. S. Lalitha, Department of Mathematics, University of Delhi for her unfailing guidance and encouragement.

The first author would like to thank Prof. Rajesh Giri, Principal, Rajdhani College, University of Delhi for his good wishes, colleagues Mrs. Krishna Threja, Dr. Umesh Kumar, Prof. Pankaj Kumar Garg, Dr. K. K. Arora, Mr. Biswajit Tahu for their help and co-operation. Special thanks are due to his former students Deepak Tiwari, Piyush Bansal, Rohan Kumar and others for helping him in many ways. His family members, wife Charanjeet and son Jeevant deserve special thanks for their co-operation. He also thanks Mr. Rajeev Arora for providing the word file of the manuscript.

The second author would like to express his heartfelt gratitude to his teachers, his parents, colleagues and students for contributing to his academic journey in different ways. He would like to begin by acknowledging the intellectual and moral support that his research supervisor and also one of the co-authors of this book, Prof. R. D. Sarma, has always provided him. He would like to thank him for numerous invaluable conversations, for constant and critical feedback on this work. He also thinks that he must be failing his duty if he did not express that he remains ever indebted to Dr. Ruchika Verma, Dr. Nidhi Arora, Prof. Iffat Jahan, and Dr. Neelima from Ramjas College (University of Delhi) for not only initiating him into this discipline of mathematics but also for imbibing an interest in it. No journey can be successful without the support and blessings of one's family. The second author would like to thank his parents and family members for their support, faith and inspiration in the hard times. He is also thankful to his friends Mr. Kamal Kumar, Ms. Bhavna Dada, Ms. Chetna Khanna, Ms. Ruchika Gupta, Ms. Neha Mongia, Ms. Nisha Bohra and Ms. Devika for their encouraging words and support which boosted his confidence to achieve this goal.

The third author would like to thank Prof. S. P. Aggarwal, Principal, Ramanujan College for all his encouragement in taking any new project. Special thanks to Prof. R. D. Sarma for believing in him and giving him the opportunity to be part of this project. The author owes an enormous debt of gratitude to his supervisor Prof. Purnima Gupta for inspiring to complete this book and for all her guidance and wishes. He is also immensely grateful to his wife Alka for her constant support and for helping him in proofreading the content. His parents and sisters deserve special thanks for all their co-operation and moral support throughout this endeavour.

Finally, all the authors thank M/s Sultan Chand and Sons and particularly Mr. Pratap Vaish, Mr. G. D. Chaudhary and Dr. Shubhra for bringing out this book with priority in a short span of time.

## CONTENTS

---

### PART - I

<b>Chapter-1</b>	<b>The Real Numbers</b>	<b>1 – 56</b>
1.1	The Algebraic Properties of $\mathbb{R}$	1
1.2	The Order Properties of $\mathbb{R}$	8
1.3	Absolute Value and $\varepsilon$ -Neighbourhoods	14
1.4	The Completeness Property of $\mathbb{R}$	23
1.5	Some Applications of the Completeness Property	31
1.6	Intervals	39
1.7	Countable Sets and the Uncountability of $\mathbb{R}$	43
1.8	Topology of Real Numbers	47
<b>Chapter-2</b>	<b>Sequences</b>	<b>57 – 150</b>
2.1	Sequences and their Limits	57
2.2	Algebra of Limits	72
2.3	Limits and Inequality	83
2.4	Monotone Sequences	95
2.5	Subsequences and the Bolzano-Weierstrass Theorem	108
2.6	Limit Superior and Limit Inferior of a Sequence	118
2.7	Cauchy Sequence	131
2.8	Sequences Diverging to $+\infty$ and $-\infty$	141
2.9	More on Sequences	145
<b>Chapter-3</b>	<b>Infinite Series</b>	<b>151 – 226</b>
3.1	Convergence of Infinite Series	151
3.2	Comparison Tests for Positive Term Series	167
3.3	Ratio Test and Root Test	178
3.4	Integral Test	192
3.5	Alternating Series and Arbitrary Term Series	197

3.6	Few More Tests for Convergence	208
3.7	Rearrangement and Product of Series	220

## PART - II

<b>Chapter-4</b>	<b>Limits of Functions</b>	<b>229 – 272</b>
4.1	Definition of Limit	229
4.2	Limit Theorems	244
4.3	One-Sided Limits	254
4.4	Limit and Infinity	257
<b>Chapter-5</b>	<b>Continuous Functions</b>	<b>273 – 314</b>
5.1	Defining Continuity	273
5.2	Combination of Continuous Functions	288
5.3	Continuity on Intervals	293
5.4	Uniform Continuity	305
<b>Chapter-6</b>	<b>Differentiation</b>	<b>315 – 372</b>
6.1	Definition of the Derivative	315
6.2	Rules for Differentiation	323
6.3	Properties of Differentiable Functions	332
6.4	Higher Order Derivatives	351
<b>Chapter-7</b>	<b>Applications of Derivatives</b>	<b>373 – 400</b>
7.1	Taylor's Theorem	373
7.2	Taylor Series Expansion of Functions	381
7.3	Cauchy's Mean Value Theorem and L'Hospital's Rule	387
7.4	More on Taylor's Theorem	394

## PART - III

<b>Chapter-8</b>	<b>Riemann Integration</b>	<b>403 – 468</b>
8.1	Riemann Integral	403
8.2	Riemann's Definition of Integrability	422
8.3	Algebra of Integrable Functions	428
8.4	Examples of Integrable Functions	442
8.5	Fundamental Theorem of Calculus	450

<b>Chapter-9 Improper Integrals</b>	<b>469 – 506</b>
9.1 Improper Integral: An Introduction	469
9.2 Improper Integrals of Type I	470
9.3 Improper Integrals of Type II	485
9.4 Improper Integrals of Mixed Type	493
9.5 Beta and Gamma Functions	497
<b>Chapter-10 Sequences of Functions</b>	<b>507 – 548</b>
10.1 Pointwise Limits and Uniform Limits	507
10.2 Interchange of Limits	528
<b>Chapter-11 Series of Functions and Power Series</b>	<b>549 – 602</b>
11.1 Series of Functions and its Convergence	549
11.2 More Results on Uniform Convergence	565
11.3 Power Series	568
11.4 Power Series and Uniform Convergence	580
11.5 Abel's Test for Uniform Convergence	594
<b>Appendix-A Tools for Curve Tracing</b>	<b>603 – 612</b>
<b>Appendix-B Graphing Rational Functions and Polar Curves</b>	<b>613 – 634</b>
<b>Hints/Answers of Exercises</b>	<b>635 – 669</b>
<b>Bibliography</b>	<b>670</b>
<b>Index</b>	<b>671 – 676</b>

## ABOUT THE BOOK

**Concepts of Real Analysis** is a student friendly textbook on real analysis, a topic taught as part of the undergraduate mathematics syllabus of pass and honours courses of all Indian universities. All the relevant topics of real analysis such as real numbers, sequences and series, limit, continuity, derivatives, Riemann Integration, improper integration, sequence and series of functions, power series etc. are covered in a lucid manner in the book. Each concept is explained with the help of solved examples. Remarks are provided whenever special attention is required about some aspects of a definition or of a result. Diagrams and graphs are provided for further comprehension of a topic or a result, whenever felt necessary. Illustrative examples are provided at the end of each topic, which is followed by exercises. Overall, it is a complete-in-itself book on Real Analysis, suitable for students and teachers alike.

## SALIENT FEATURES

- Covers the entire syllabus of Real Analysis taught in the undergraduate level courses including B.Sc. (H.), B.A. (Prog.), B.Sc. (Prog.) of all Indian universities.
- Written in simple language.
- Emphasis on logical, step-by-step development of proofs.
- More than 450 solved examples and 50 diagrams.
- Sufficient explanations are provided for the concepts introduced and results provided.
- Remarks are provided to highlight any special aspect of a definition or a result, which might go unnoticed by the readers.
- Student friendly approach.
- Appendix is added to provide the basics for curve tracing.

## ABOUT THE AUTHORS

**R. D. Sarma** is a Professor in the Department of Mathematics, Rajdhani College, University of Delhi. He has more than 27 years of teaching experience in the undergraduate and postgraduate level, in India and abroad. His earlier book "Basic Applied Mathematics for the Physical Sciences" (co-authored) is quite popular among the students of B.Sc. (Prog.). His primary field of research is topology and fuzzy set theory. Professor Sarma has published 45 research papers so far in various international journals. Three students have got Ph.D. degree and two students have got M.Phil. Degree under his supervision.

**Ankit Gupta** is an Assistant Professor in the Department of Mathematics, Bharati College, University of Delhi. He has a teaching experience of more than 7 years and has taught a variety of subjects from Analysis, Metric Spaces to Mathematical finance at undergraduate level. He received his doctorate degree in Topology from the Department of Mathematics, University of Delhi. He has more than 14 research publications in the area of topology and variational inequality problems in reputed International Journals.

**Rajesh Singh** is an Assistant Professor in the Department of Mathematics, Ramanujan College, University of Delhi. He has a teaching experience of more than 6 years at the University of Delhi. He obtained his doctorate degree in 2019 from the Department of Mathematics, University of Delhi. He has more than 10 Research Publications in journals of international repute and has written several e-chapters on Undergraduate Mathematics for ILLI, University of Delhi. He has delivered invited talks at various international platforms including a lecture in CIMPA Research School held at Lebanese University, Lebanon. His YouTube Channel "COSMOS LEARNING" has more than 300 video lectures that has catered to more than 10,000 students of undergraduate mathematics.
