EVERY GENUINE COPY OF THIS BOOK HAS A HOLOGRAM

In our endeavour to protect you against counterfeit/fake books, we have pasted a copper hologram over the cover of this book. The hologram displays the full visual image, unique 3D multi-level, multi-colour effects of our logo from different angles when tilted or properly illuminated under a single light source, such as 3D depth effect, kinetic effect, pearl effect, gradient effect, trailing effect, emboss effect, glitter effect, randomly sparking tiny dots, micro text, laser numbering, etc.

A fake hologram does not display all these effects.

Always ask the bookseller to put his stamp on the first page of this book.

All Rights Reserved: No part of this book, including its style and presentation, can be reproduced, stored in a retrieval system, or transmitted in any form or by any means – electronic, mechanical, photocopying, recording or otherwise without the prior written consent of the publishers. Exclusive publication, promotion and distribution rights reserved with the Publishers.

Warning: An unauthorised act done in relation to a copyright work may result in both civil claim for damages and criminal prosecution.

Special Note: Photocopy or Xeroxing of educational books without the written permission of publishers is illegal and against Copyright Act. Buying and Selling of pirated books is a criminal offence. Publication of a key to this book is strictly prohibited.

General: While every effort has been made to present authentic information and avoid errors, the author and the publishers are not responsible for the consequences of any action taken on the basis of this book.

Limits of Liability/Disclaimer of Warranty: The publisher and the author make no representation or warranties with respect to the accuracy or completeness of the contents of this work and specifically disclaim all warranties, including without limitation warranties of fitness for a particular purpose. No warranty may be created or extended by sales or promotional materials. The advice and strategies contained therein may not be suitable for every situation. This work is sold with the understanding that the publisher is not engaged in rendering legal, accounting, or other professional services. If professional assistance is required, the services of a competent professional person should be sought. Neither the publishers nor the author shall be liable for damages arising herefrom.

Disclaimer: The publishers have taken all care to ensure highest standard of quality as regards typesetting, proofreading, accuracy of textual material, printing and binding. However, they accept no responsibility for any loss occasioned as a result of any misprint or mistake found in this publication.

Author's Acknowledgement: The writing of a Textbook always involves creation of a huge debt towards innumerable authors and publications. We owe our gratitude to all of them. We acknowledge our indebtedness in extensive footnotes throughout the book. If, for any reason, any acknowledgement has been left out we beg to be excused. We assure to carry out correction in the subsequent edition, as and when it is known.

PREFACE

The first edition of the book was published in 2023 for undergraduate students studying Economics Honours. The book follows the updated syllabus outlined in the National Education Policy (NEP) 2020. The objective of writing the book is to introduce students to the fundamental theory of Econometrics, including linear regression, estimation, and data problems. The prerequisites for the course are statistics, calculus, and basic mathematical procedures.

In the second edition, new examples and exercise problems have been added to each chapter. Illustrative examples drawn from past question papers of competitive examinations have been included, enhancing the book's usefulness for students preparing for entrance tests and civil service candidates.

The straightforward approach and inclusion of an extensive range of illustrative examples make the new edition more useful. *Basic Econometrics* by Damodar N. Gujarati, *Introduction to Econometrics* by G.S. Maddala, and *Econometric Analysis* by William H. Greene have been consulted to write this book.

The objective of the second edition is to discuss econometric tools and techniques used in data analysis that the Economics Honours undergraduate students in the Economics discipline require to advance in their careers. Companies across different industries need a large pool of experts in the field of econometrics and data analysis to build products and to solve business problems. Besides its wide range of applications in academic research, knowledge of econometrics increases job opportunities to a great extent.

Chapter 1 addresses the fundamental concepts of econometrics and its applications across various fields.

Chapter 2 outlines the techniques for estimating simple linear regression analysis and three-variable multiple linear regression models.

Chapter 3 examines the properties of regression estimators and dummy variable regression.

Chapter 4 focuses on hypothesis testing in regression analysis and Analysis of Variance. In the second edition, there is a new discussion of the F -test for the restricted linear least squares regression model.

Chapter 5 details the three data problems—multicollinearity, heteroscedasticity, and autocorrelation—and suggests solutions for each of these data problems.

Chapter 6 tackles the issues of model specification, discussing the challenges associated with mis-specifications of regression models and the statistical tests used to identify incorrect model specifications. In this edition, discussions of the Breusch-Godfrey test of autocorrelation and the Park test of heteroscedasticity are included.

Appendix A1 applies the cross-sectional data analysis using STATA and RStudio Econometric packages. It contains the commands in STATA and RStudio with examples.

Appendix A2 is an addition to the existing book in the current edition. The time series analysis and panel data analysis are discussed in this section, with the STATA commands for time series and panel data analysis.

I express my gratitude to my parents, teachers, friends, and colleagues who have encouraged me to write this book.

Dr. Jhumur Sengupta

CONTENTS

1. Nature and Scope of Econometrics	1-12
<i>Learning Outcomes</i>	1
What is Econometrics?	1
Theoretical and Applied Econometrics	1
Distinction between Economic Model and Econometric Model	1
What We Do in Regression Analysis?	2
Stochastic and Non-stochastic Variables in Econometric Analysis	2
Concept of Stochastic Relation and Role of Random Disturbance in Econometric Model	3
Some Statistical Distributions Used in Econometric Analysis	3
Normal Distribution	3
Chi-square (χ^2) Distribution	4
Student's <i>t</i> -Distribution	4
<i>F</i> -Distribution	4
Importance of Normal Distribution in Econometric Analysis	4
Types of Data	5
Application of Econometrics in Different Branches of Social Science	5
Econometrics in Sociology	5
Econometrics in Psychology	5
Econometrics in Political Science	5
Procedure of Estimation in Regression Analysis	6
Classical and Bayesian Approach in Econometrics	6
Statistical Estimation and Inference – A Prerequisite for Econometric Analysis	7
Formation of Null and Alternative Hypothesis	7
Formation of Test Statistic	7
Confidence Interval & Critical Region	7
Properties of Good Estimators	7
Software Packages used in Econometrics	8
<i>Key Points</i>	8
<i>Examples</i>	8
<i>Short Questions</i>	10
<i>Exercises</i>	10

2. Estimation of Classical Linear Regression Model	13-42
<i>Learning Outcomes</i>	13
Specification of Regression Model	13
Least Square Method	14
Population Regression Function (<i>PRF</i>) and Sample Regression Function (<i>SRF</i>)	15
Concepts of <i>PRF</i> and <i>SRF</i>	15
Estimation of <i>SRF</i>	15
Ordinary Least Squares in Two Variable Regression Model	16
Ordinary Least Squares in Three Variable Regression Model	17
Correlation	21
Simple Correlation	21
Derivation of Regression Parameters Using Simple Correlation Coefficient	21
Partial Correlation Coefficient	22
Two Variable Regression: An Illustration	24
Multiple Regression: An Illustration	25
Functional Form	25
Semi Log Specification	25
Double Log Specification	26
Some Other Specifications	26
Usefulness of Functional Forms	26
Non-Linear Specifications	27
Regression with No-Constant Term	27
<i>Key Points</i>	27
<i>Examples</i>	28
<i>Short Questions</i>	39
<i>Exercises</i>	39
3. Properties of Least Square Estimators	43-64
<i>Leaning Outcomes</i>	43
Properties of Least Square Estimators in Simple Linear Regression	43
Gauss Markov Theorem	46
Least Square Estimator of σ^2	46
Dummy Variable Regression with Illustration	48
Intercept Dummy	48
Slope Dummy	49
Intercept and Slope Dummy	50
Dummy Variable Trap	50
<i>Key Points</i>	51
<i>Examples</i>	51
<i>Short Questions</i>	62
<i>Exercises</i>	62
4. Statistical Inference in Linear Regression Model	65-100
<i>Learning Outcomes</i>	65
Testing of Hypothesis	65

Formation of H_0 and H_A	65
Use of Standard Normal, t , Chi-Square, and F in Statistical Inference in Linear Regression Model	66
Use of Standard Normal Test in Testing the Statistical Significances of Estimated Values of Regression Parameters (when σ^2 is known)	66
Use of t -test Statistic in Testing the Statistical Significance of Estimated Values of Regression Parameters (when σ^2 is unknown)	66
Use of Chi-square (χ^2) Test in Testing Significance of σ^2	67
Two Tailed and One Tailed Test in Hypothesis Testing	67
Two Tailed t -test in Two Variable Regression	67
Two Tailed t -test in Multiple (Three Variable) Regression	68
One Tailed t -test in Two Variable Regression	69
One Tailed t -test in Multiple (Three Variable) Regression	70
Illustration of Two-Tailed t -test	71
Illustration of One-Tailed t -test	71
Chi-Square Test (χ^2 Test) in Checking the Significance of Estimated Error Variance	72
Two-tailed χ^2 Test	72
One-tailed χ^2 Test	73
F -Test for Hypothesis Testing	73
Use of α Value in Checking Statistical Significance	74
Type I and Type II Error and Power of a Test	75
Goodness of Fit and Analysis of Variance ($ANOVA$)	75
$ANOVA$ in Two Variable Regression	75
$ANOVA$ in Multiple (Three Variables) Regression	76
Multiple Correlation Coefficient	77
Adjusted R^2	78
F -Statistic and R^2	79
Comparison of Two Functional Specifications of Regression Models with Different R^2	80
<i>Key Points</i>	80
<i>Examples</i>	80
<i>Short Questions</i>	97
<i>Exercises</i>	98

5. Data Problems and Violations of Classical Assumptions 101-129

<i>Learning Outcomes</i>	101
Multicollinearity – Consequences, Detection, and Remedies	101
What is Multicollinearity?	101
Consequences of Multicollinearity	101
Detection of Multicollinearity	103
Remedial Measures	103
Exact and Near Multicollinearity	104
Heteroscedasticity – Consequences, Detection and Remedies	105
What is Heteroscedasticity?	105

Consequences of Heteroscedasticity	105
Detection of Heteroscedasticity	106
Remedial Measures of Heteroscedasticity	109
Generalized Least Squares Method in the Presence of Heteroscedasticity	110
Autocorrelation – Consequences, Detection (Durbin Watson Test) and Remedies	111
What is Autocorrelation?	111
Consequences of Autocorrelation	112
Detection of Autocorrelation (Durbin Watson Test)	112
Limitations of Durbin Watson Test	113
Remedies for Autocorrelation Problem	114
Generalized Least Squares in Presence of Autocorrelation	115
Concept of Forecasting	117
<i>Key Points</i>	118
<i>Examples</i>	118
<i>Short Questions</i>	128
<i>Exercises</i>	128
6. Specification Analysis	131-150
<i>Learning Outcomes</i>	131
Omission of Relevant Variable	131
Inclusion of Irrelevant Variable	132
Test of Specification Error: Ramsey RESET Test	134
Test for Normality	134
Test for Linearity	135
<i>Key Points</i>	135
<i>Examples</i>	135
<i>Short Questions</i>	149
<i>Exercises</i>	149
Appendix – A1. Cross Section Data Analysis Using STATA and RStudio	151-163
<i>Learning Outcomes</i>	151
Cross Section Data Analysis in STATA	151
STATA Interface	151
Log File and Do File in STATA	152
Data Import in STATA	152
Regression Analysis in STATA	153
Cross Section Data Analysis in RStudio	157
RStudio Interface	157
R-Library	158
Import of Data in RStudio	158
Functions and Assignments in RStudio	159
Data Analysis in RStudio	159
Regression and Correlation Analysis in RStudio	160

Appendix – A2. Time Series and Panel Data Analysis Using STATA	165-175
<i>Learning Outcomes</i>	165
What is Time Series Analysis?	165
Use of Lag and Differencing Operator in Time Series	165
Stationarity and Non-Stationarity of Time Series	165
Meaning of Stationarity	165
Dickey Fuller Test	166
Augmented Dickey Fuller Test	166
Time Series Data Analysis in Stata	166
Panel Data Analysis	170
Linear Models of Panel Data	170
Pooled Regression Model	170
Fixed Effect Model	171
Random Effect Model	171
Tests for Pooled, Fixed Effect and Random Effect Model	171
Panel Data Analysis in STATA	171
Pooled Regression Result	173
Fixed Effect Regression Result	173
Random effect Regression Result	174
Hausman Test in Panel Data Analysis	174
Index	177-179

SYLLABUS

UNIVERSITY OF DELHI

Delhi School of Economics

Department of Economics

Semester IV - 2025

- I Linear Regression Model
 - (i) *OLS* method of Estimation and Properties of Estimators
 - (ii) Measures of Fit
 - (iii) Testing of Hypotheses, Prediction
 - (iv) Introduction to econometric software and practical application using econometric software (*GRET*L/EViews/ R/STATA/EXCEL, *etc.*)
- II Multiple Regression Model
 - (i) *OLS* method of Estimation and Properties of *OLS* Estimators
 - (ii) Testing of Hypotheses
 - (iii) Measures of Fit
 - (iv) Practical Application using Econometric Software (*GRET*L / EViews / R / STATA / EXCEL, *etc.*)
- III Functional Forms and Qualitative Independent Variables
 - (i) Non-linear Models and Transformations of Variables
 - (ii) Dummy Variables
 - (iii) Practical Application using Econometric Software (*GRET*L/EViews/ R / STATA / EXCEL, *etc.*)
- IV Violations of Classical Assumptions
 - (i) Consequences, Detection, and Remedies: Multicollinearity, Heteroscedasticity, Serial Correlation
 - (ii) Practical Application Using Econometric Software (*GRET*L / EViews / R / STATA / EXCEL, *etc.*)
- V Specification Bias
 - (i) Model Selection Criteria
 - (ii) Types of Specification Errors, Omitted Variable Bias
 - (iii) Inclusion of Irrelevant Variables
 - (iv) Incorrect Functional Form, Errors of Measurement
 - (v) Practical Application Using Econometric Software (*GRET*L / EViews / R / STATA / EXCEL, *etc.*)

UNIVERSITY OF CALCUTTA

B.A. / B.Sc Economics (Honours)

Semester V

1. Nature and Scope of Econometrics

- (i) Distinction between Economic Model and Econometric model
- (ii) Concept of stochastic relation, Role of random disturbance in econometric model
- (iii) Application of Econometrics in different branches of social science

2. Classical Linear Regression Model

Simple linear regression model (*SLRM*) and multiple linear regression (*MLRM*) with two regressors

- (i) The classical assumptions (basic interpretation); Concepts of population regression function and sample regression function, *SLRM* and *MLRM*.
- (ii) Estimation of *SLRM* and *MLRM* (with two regressors only) by method of ordinary least squares.
- (iii) Properties of the Least Squares Estimators in *SLRM*- Gauss-Markov theorem.
- (iv) Testing of hypotheses in *SLRM* and *MLRM* – Single Test and Joint Test
- (v) Goodness of fit (in terms of R^2 , adjusted R^2 and F -statistic), Analysis of Variance (*ANOVA*).
- (vi) Economic Interpretation of Regression results – Statistical significance and economic importance.
- (vii) Simple correlation, partial correlation and multiple correlation (Definition, and interpretation in the context of *SLRM* and *MLRM*).

3. Qualitative (Dummy) Independent Variables

- (i) Intercept dummy and Slope dummy (only interpretation of the model).
- (ii) Forecasting – Ex-post forecast and Ex-ante forecast, forecast error (only for two variable model).

4. Violations of Classical Assumptions

- (i) Multicollinearity – Consequences, Detection (Variance Inflationary Factor) and Remedies.
- (ii) Heteroscedasticity – Consequences, Detection (Lagrange Multiplier test) and Remedies.
- (iii) Autocorrelation - Consequences, Detection (Durbin-Watson test) and Remedies.

About the Book

The first edition of Introduction to Econometrics was published in 2023. In the second edition, more problems have been added to the examples and exercises in each chapter. A new appendix explaining how to use STATA software for time series and panel data analysis has been included. The clear and straightforward approach to calculations and derivations addressing the fundamental theories and applications of Econometrics remains unchanged, making it ideal for beginners. The second edition continues to avoid the use of matrix algebra or calculus, as these methods can sometimes make the theory and empirical applications more complex for beginners.

Salient Features

- ❑ In the second edition, the coverage of topics, including regression models (simple and multiple), parameter estimation techniques, properties of estimators, hypothesis testing, and model specification remains the same as before.
- ❑ Additional examples with more illustrations and exercise problems.
- ❑ In the chapters, examples, and exercise problems are taken from competitive examinations such as the Indian Statistical Service (ISS), UPSC, GATE, and UGC NET Examination.
- ❑ The addition of the second Appendix containing time series and panel data analysis using STATA.
- ❑ More detailed discussion of the applications of the computer packages STATA and RStudio is provided in the two appendices.

About the Author

Dr. Jhumur Sengupta is affiliated with Dinabandhu Andrews College in Calcutta, India, as an Assistant Professor of Economics. She has over twenty years of teaching experience in Econometrics and Quantitative Economics. Her previous roles include Assistant Professor at the International School of Business in Calcutta, Jaypee Business School in Noida, South City College in Calcutta, and Kirorimal College under Delhi University. She obtained her M.A. and M.Phil. degrees in Economics from Jawaharlal Nehru University in New Delhi and completed her Ph.D. at the University of Calcutta. Her research interests include mathematical economics, Econometrics, Empirical Economics, and Political Economy. She has published numerous research papers based on empirical studies in various peer-reviewed journals with national and international recognition. She is passionate about conducting research in Empirical and Quantitative Economics.
